Brand Ideology

Core Values

We are a **patient centric** company and value relations.

We are honest, **transparent**, and trustworthy.

We aim for **continuous innovation** in med-tech.

What, Why, and How

We are a global service provider with an aim to improve healthcare through personalized technology.

To eliminate the challenges regarding efficiency, flexibility, and personalization in the supply of medical visualisation & devices.

By building a digital ecosystem that provides medical professionals with end-to-end pre-operative planning and case management tools.

Mission

Building an affordable & widely accessible digital end-to-end surgical planning platform keeping patient's healthcare at top priority.

Vision

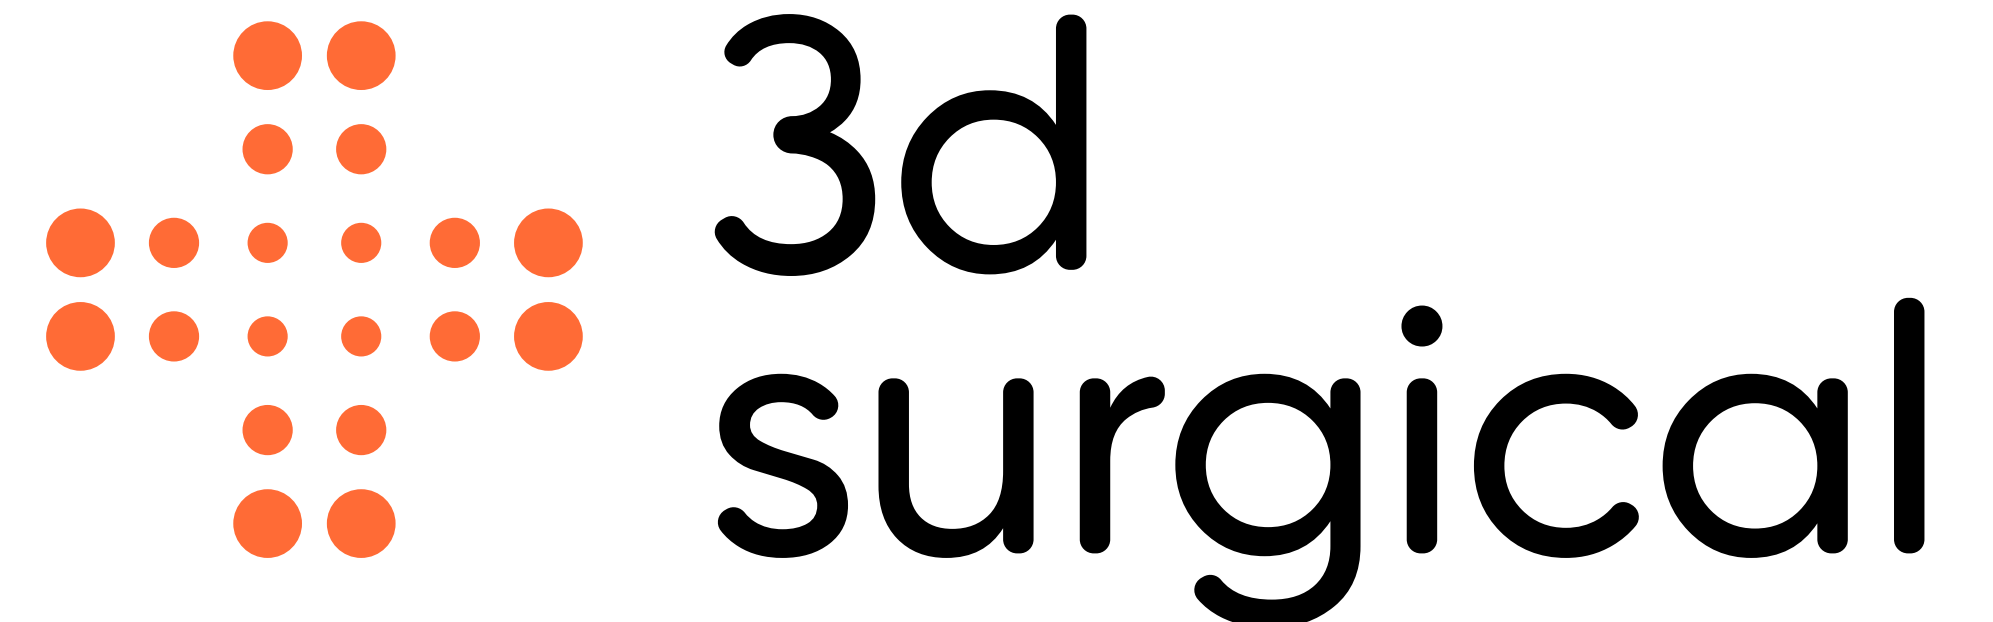

To make 3d visualisation and personalised technology in the healthcare industry more accessible for better and precise treatment procedures.

Logo Guidelines

Primary Logo

The logo for 3d Surgical is designed to resonate with the brand values and goals. It aims to project the brand as an innovator in medical technology.

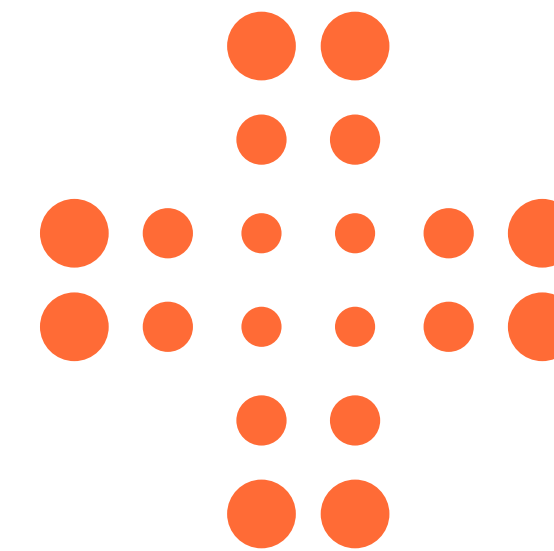

The customized typeface is designed to keep the brand true to its values of being transparent and humble, and yet confident and professional. The soft round-edged type gives it a very approachable and human-centric look, while the black color asserts its expertise in the field.

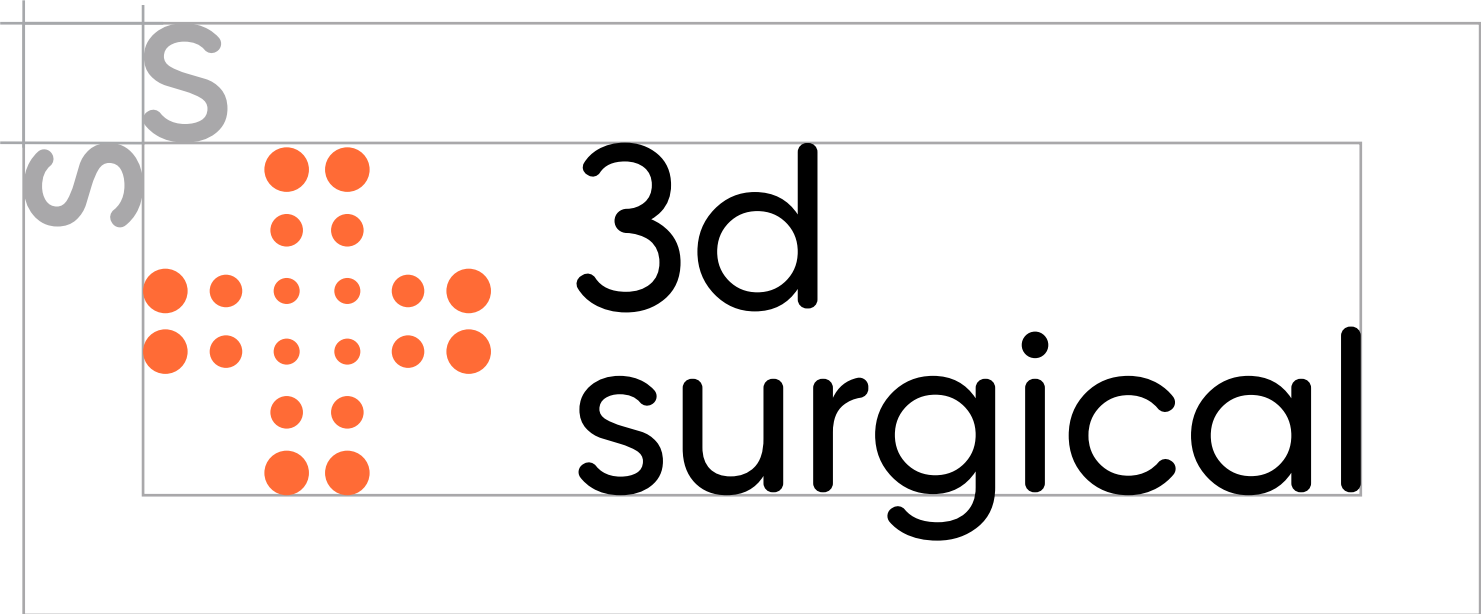

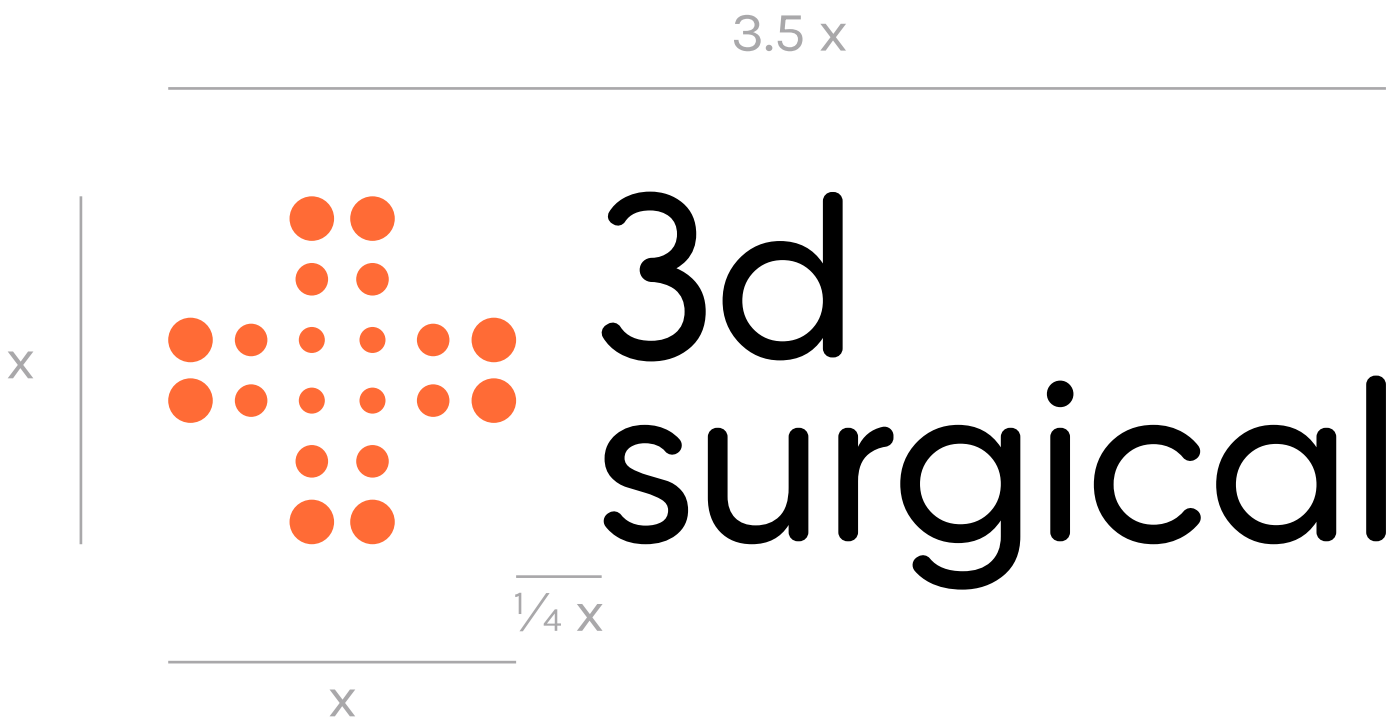

Secondary Logo

The symbol is a testament to the futuristic vision of the brand, and aptly represents its contribution to building that future. It is created using dots that represent data originating from the center, subtly giving it depth by scaling the dots to show the nature of the 'data' that the brand generates- 3D.

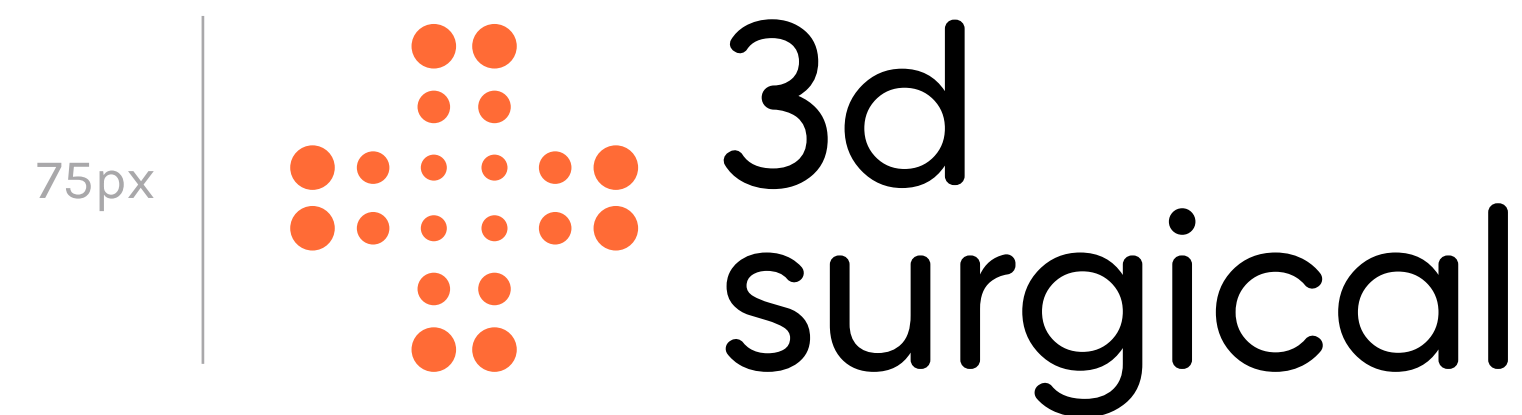

It is to be used when there are space constraints.

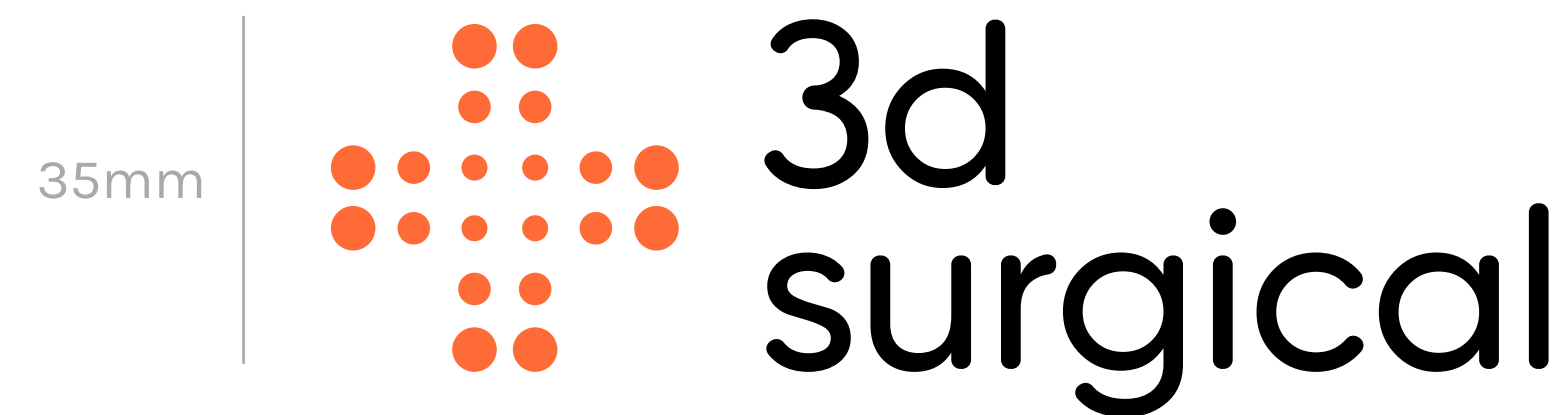

Proportions and Clearance

Minimum Size

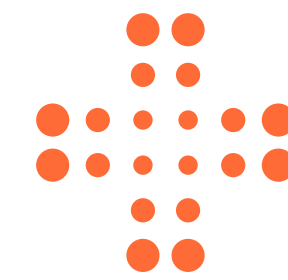

Digital

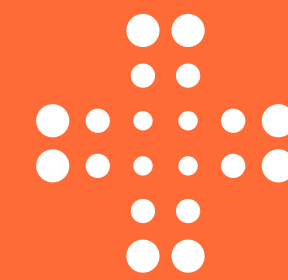

Print

Colour Variations

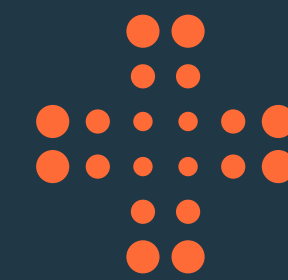

To ensure that the logo is legible at all times on any medium and collateral use the logo only in the defined colours. The secondary logo could be used in situations where the background doesn't allow for two defined colours to be legible simultaneously. The primary logo is not to be used in a single colour.

Common Mistakes

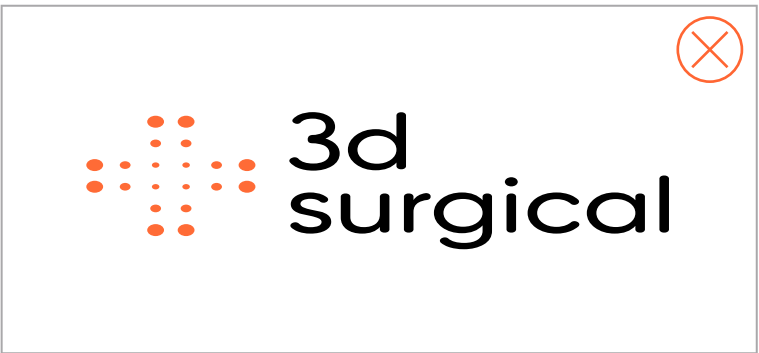

Alterations

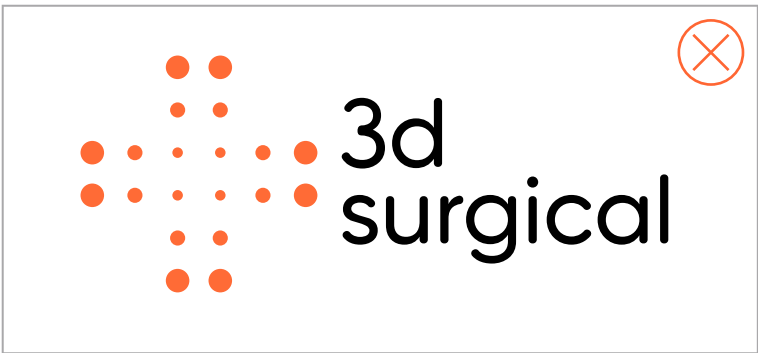

Do not rotate the Logo or Logomark

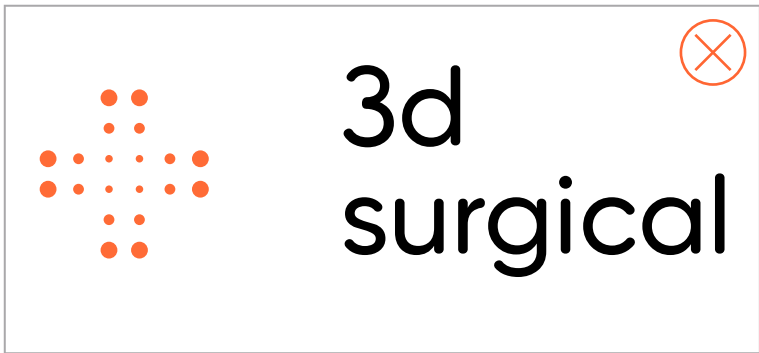

Do not change the size of dots

Do not distort the logo or logomark

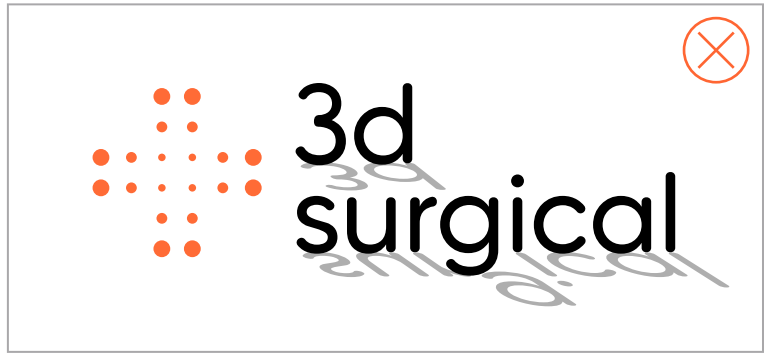

Do not change the proportions

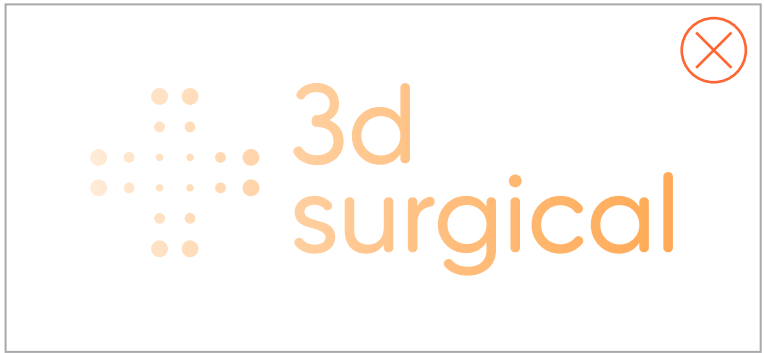

Do not alter spacing

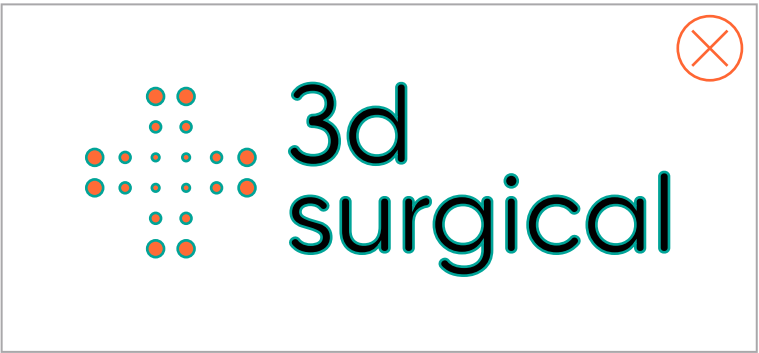

Special Effects

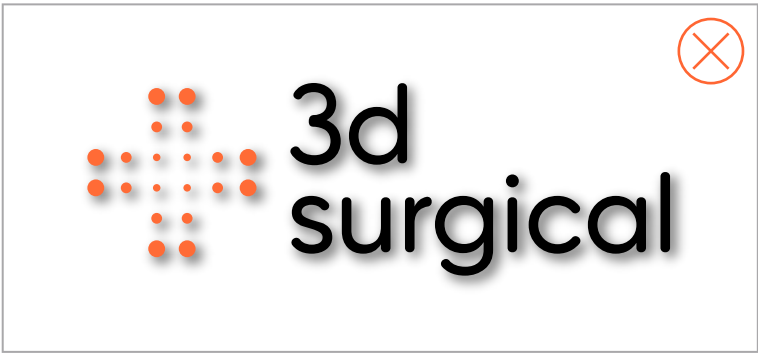

Do not add shadows

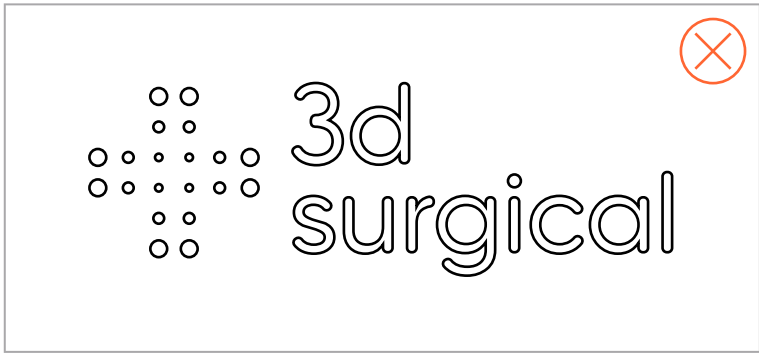

Do not use gradients

Do not add outlines

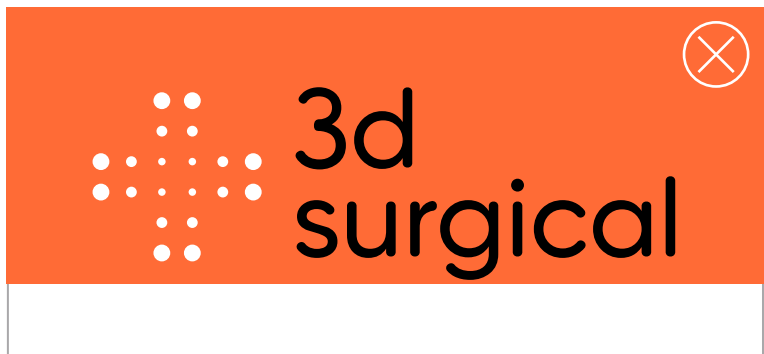

Do not add drop shadows

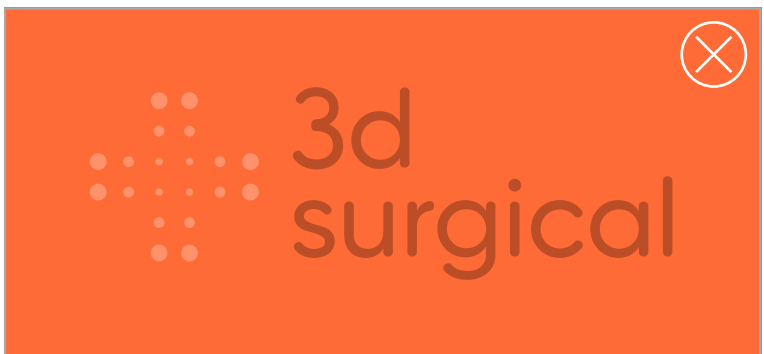

Do not use in outlines

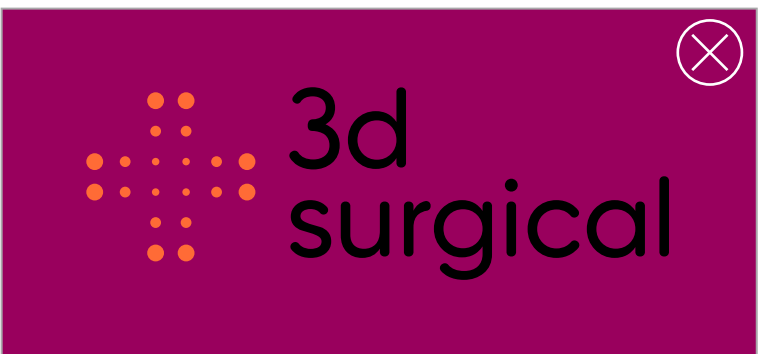

Undefined Usage

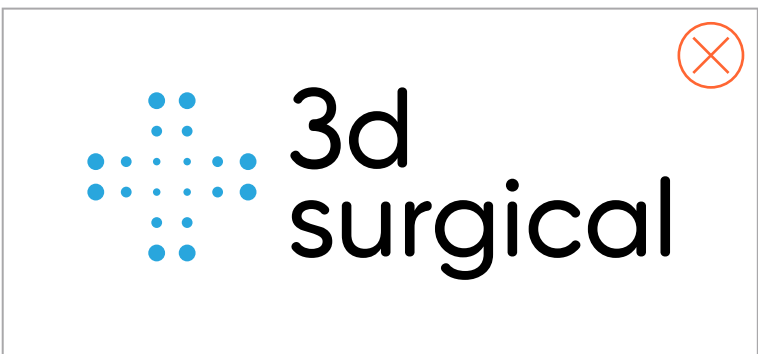

Do not use without defined exclusion

Do not add transparency

Do not use undefined colour backgrounds

Do not use undefined colours

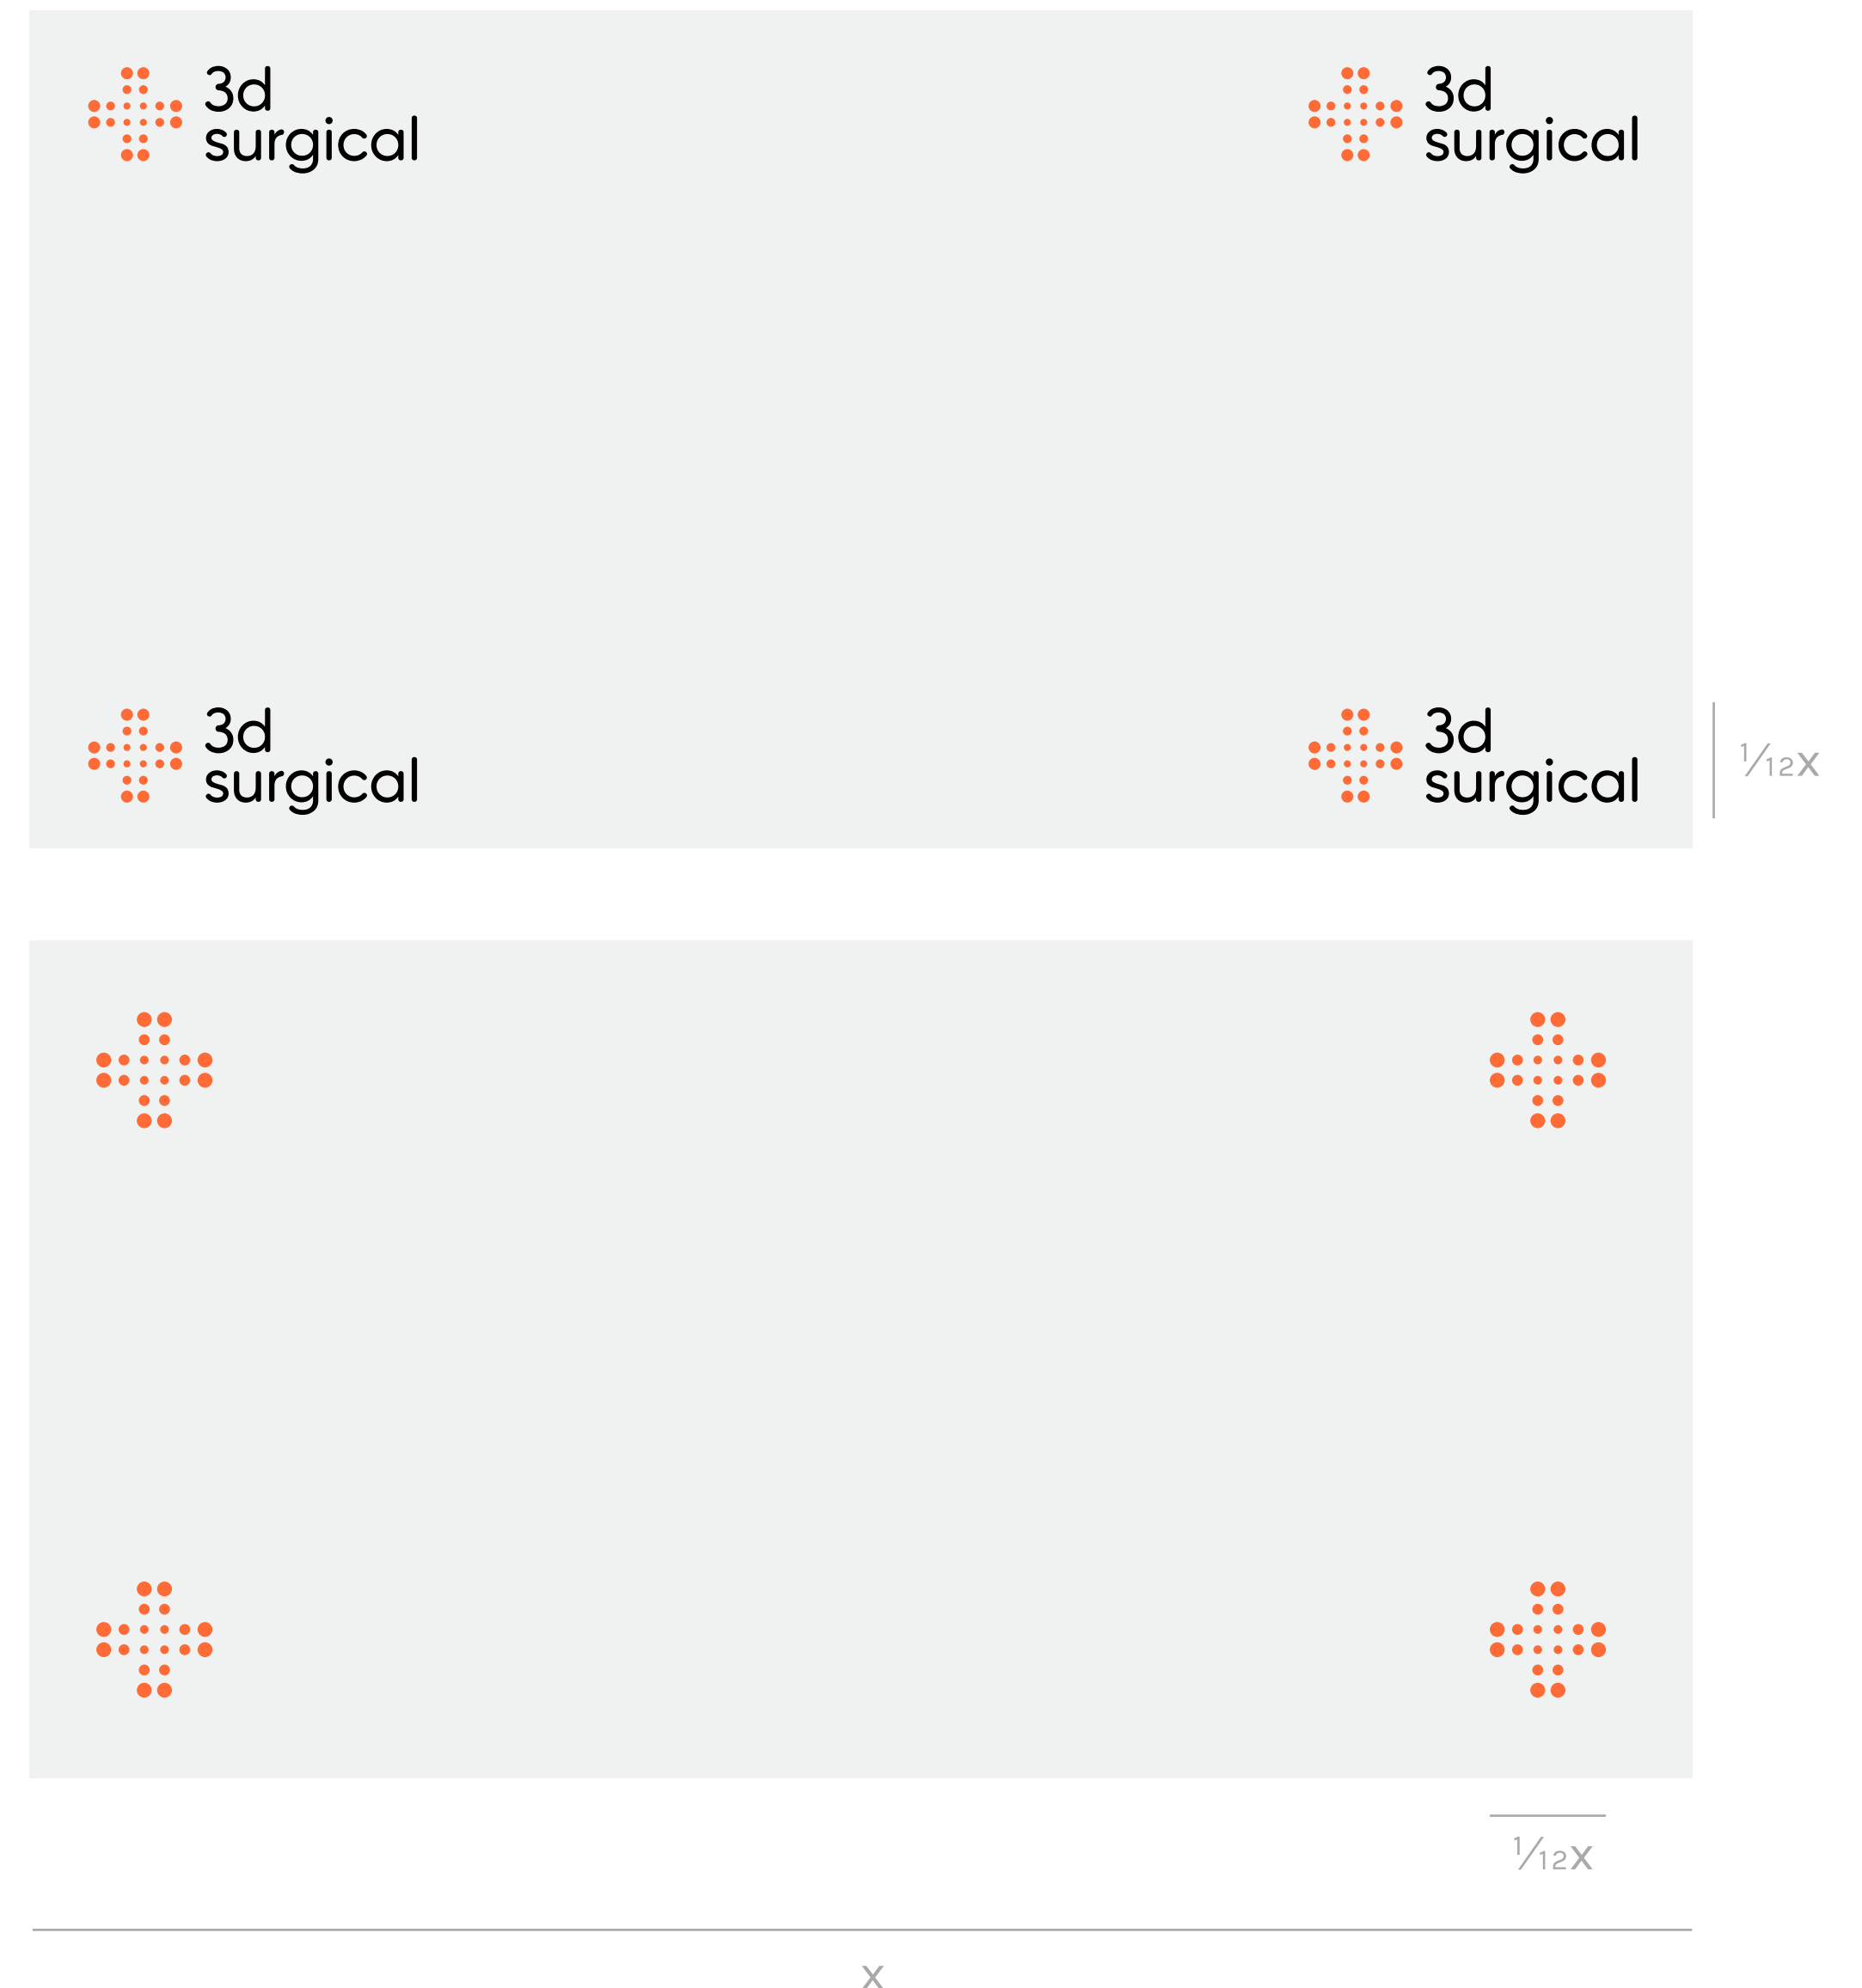

Do not use undefined orientation

Logo Placement

General Layout

On any collateral, the logo should only be placed at one of the four corners. Please make sure to add the relevant padding as defined in the “Proportions & Clearance” part of this document.

The shortest side of the logo should never be less than 1/12th of the longest side of the collaterals it's being used on.

Logo Placement

On low-contrast backgrounds

For placing logos on backgrounds or images that don't offer optimal contrast for the logo to be legible within the defined colours, use a rectangular slab as a background.

The rectangular slab for the logo background should be in defined orange colour or white colour with the logo in defined colours. The rectangular slab should cover either the length or breadth of the collateral.

Visual Language

Colour Palette

Primary

The 3d Surgical colour palette is comprised of six colors, three primary and three accent colours. These colour variations have been selected to give the flexibility needed to express different ideas and to differentiate key messages and information.

3d Surgical's colours bring visual life to all of our communication. Our primary colour mix includes a representation of innovation, medical industry, and digital futurism with its orange, black, and grey.

#000000
Pantone Black 6 C

#A7A9AC
Pantone Cool Grey 6 C

#FF6633
Pantone 1645 C

Colour Palette

Secondary

Use secondary colours to add visual variety.
The secondary colours will provide nice accents
to our primary palette as documents are created.
The palette offers some visual pop to draw
attention to important details.

Typography

The typefaces are handpicked to create an experience that reinforces the brand values and goals in every collateral and piece of marketing.

Nunito Sans is a soft geometric font with rounded edges that compliments the custome type used in the logo. It should be used for headings, preferreably in ‘light’ weight to keep the design language professional, clean and technologically forward.

Karla is used for sub-headings and body copy. It’s a very versatile font in terms of legibility and it’s character. The various weights available makes it useable in number of ways to define sub-headings and tertiary texts.

Primary

Nunito Sans

abcdefghijklmnopqrstuvwxyz
ABCDEFGHIJKLMNOPQRSTUVWXYZ
01234556789 (<[{/?;_!#.-%^&*+=\}]>)

Secondary

Karla

abcdefghijklmnopqrstuvwxyz

Nunito Sans Light
110pt

This is Nunito Sans,
the typeface for headings.

Karla Bold
48pt

Karla is used for sub-headings.

Karla Regular
36pt

This is Karla, the typeface for body copy. Lorem ipsum dolor sit aet, co
sectetuer adipiscing elit, sed diam nonummy nibh euismod n ullamco
per suscipit lobortis nisl uteuismod tincidunt ut laoreet dolore magna
aliquam erat volutpat. Ut wquis nostrudation ulla.

Alternate Typefaces

Our secondary typefaces are available in just as many weights to replace the primary fonts in their absence without altering the design language.

Segoe UI will be used to replace both the heading font and body-copy font but with distinct weights.

Primary & Secondary

Segoe UI

abcdefghijklmnopqrstuvwxyz

ABCDEFGHIJKLMNOPQRSTUVWXYZ

01234556789 (<[{}/?;-_!#.-%^&*+=\}]>)

Segoe UI Semilight

Imagery

The imagery should express the innovative and data focused brand personality of 3d Surgical. It should be kept in mind that they resonate with the brand's ideology of being transparent, professional, and patient-centric.

The photography style and color tone followed throughout should reflect the brand's emphasis on being minimal, direct, and clear in communication.

Professionally shot images that showcase 3d Surgical's services.

Well-lit images with a clear focal point and easily identified subject.

Images with neutral tones that are professional and approachable.

Advisable to have a hint of brand colours wherever possible.

Use soft backgrounds for images with many elements.

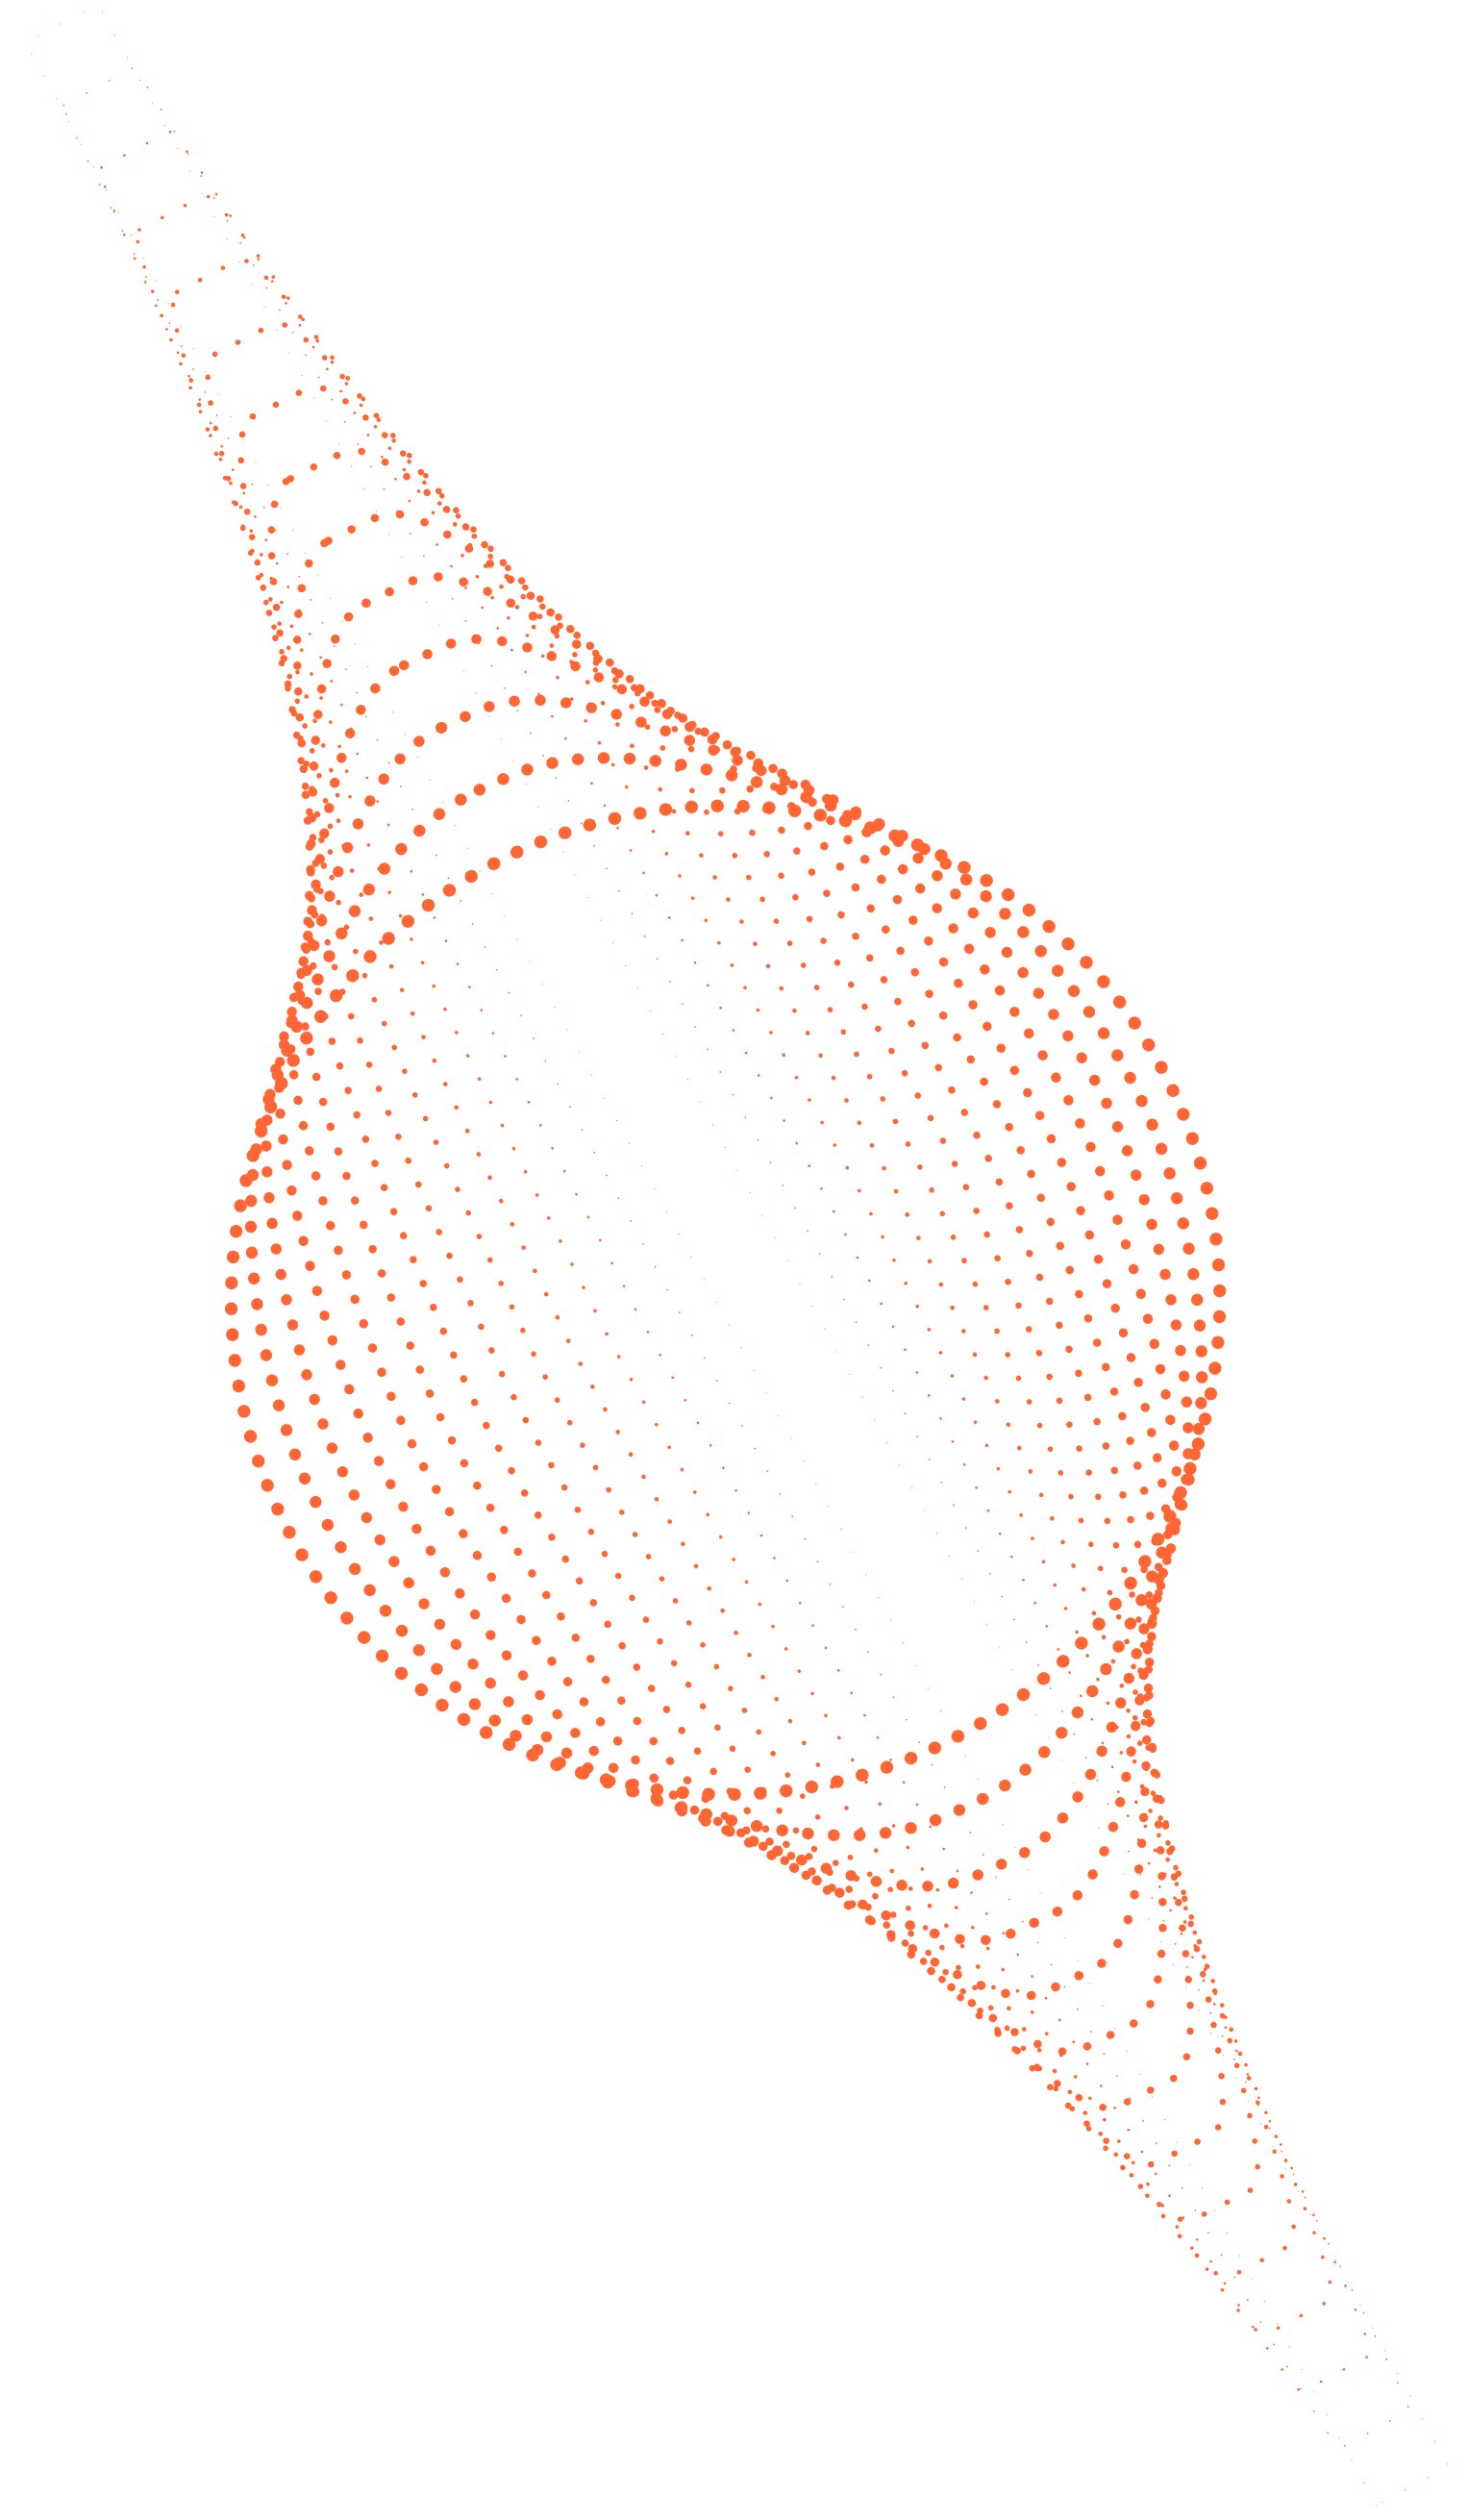

Close-up shots to show precision and make impactful visuals.

Design Guidelines

Graphic Elements

Dots as Particles

The distinct and recognizable part of the identity system is the integrated and dynamic way of using the dots from the logo symbol throughout the identity. Illustrations and icons made using these dots as particles should be minimal and abstract to represent the futuristic technological positioning of the brand.

Graphic Elements

Construction- Basic Shapes

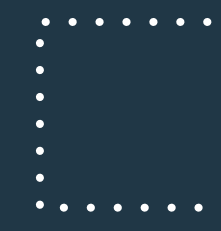

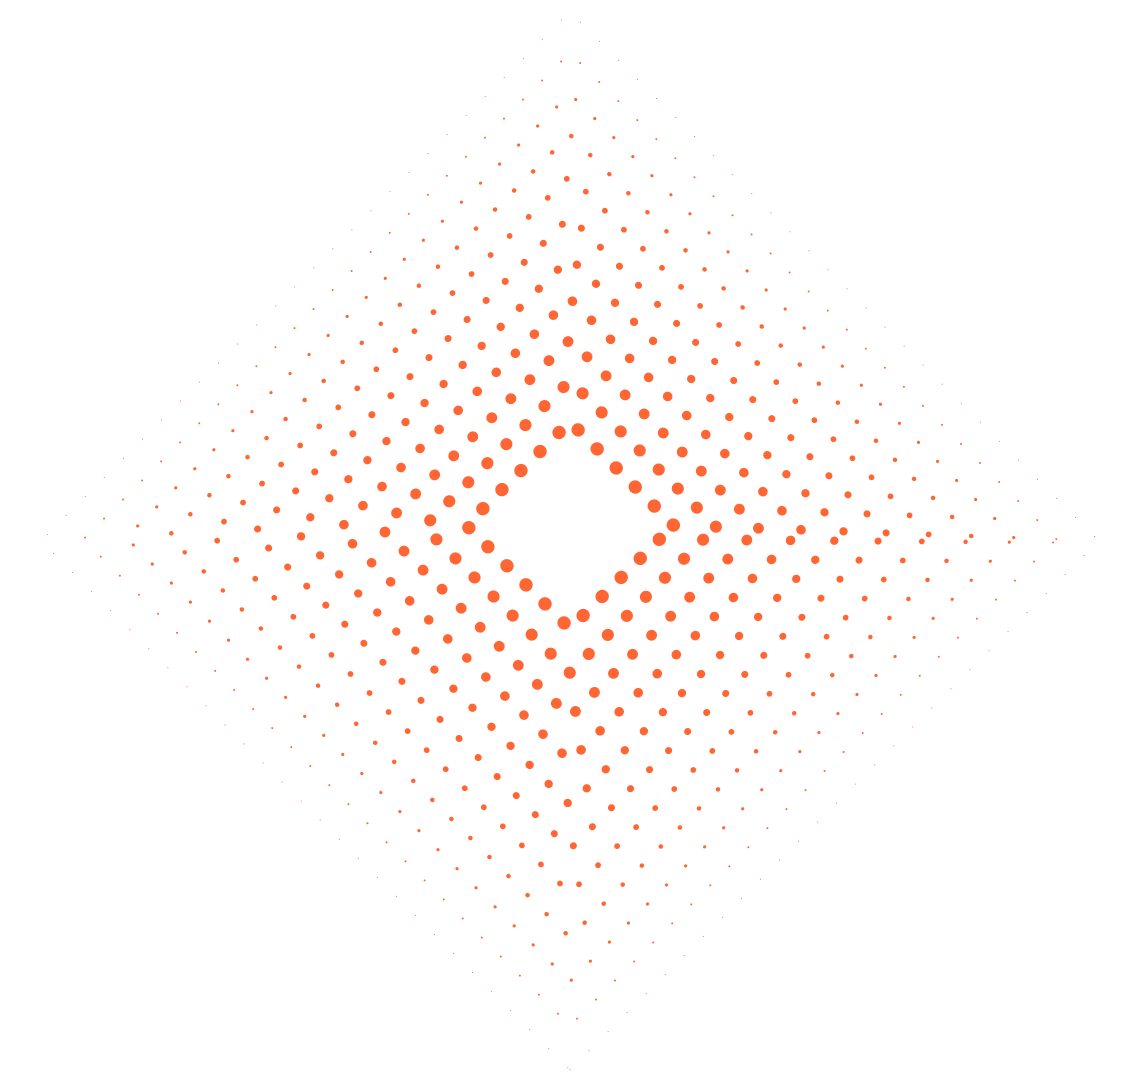

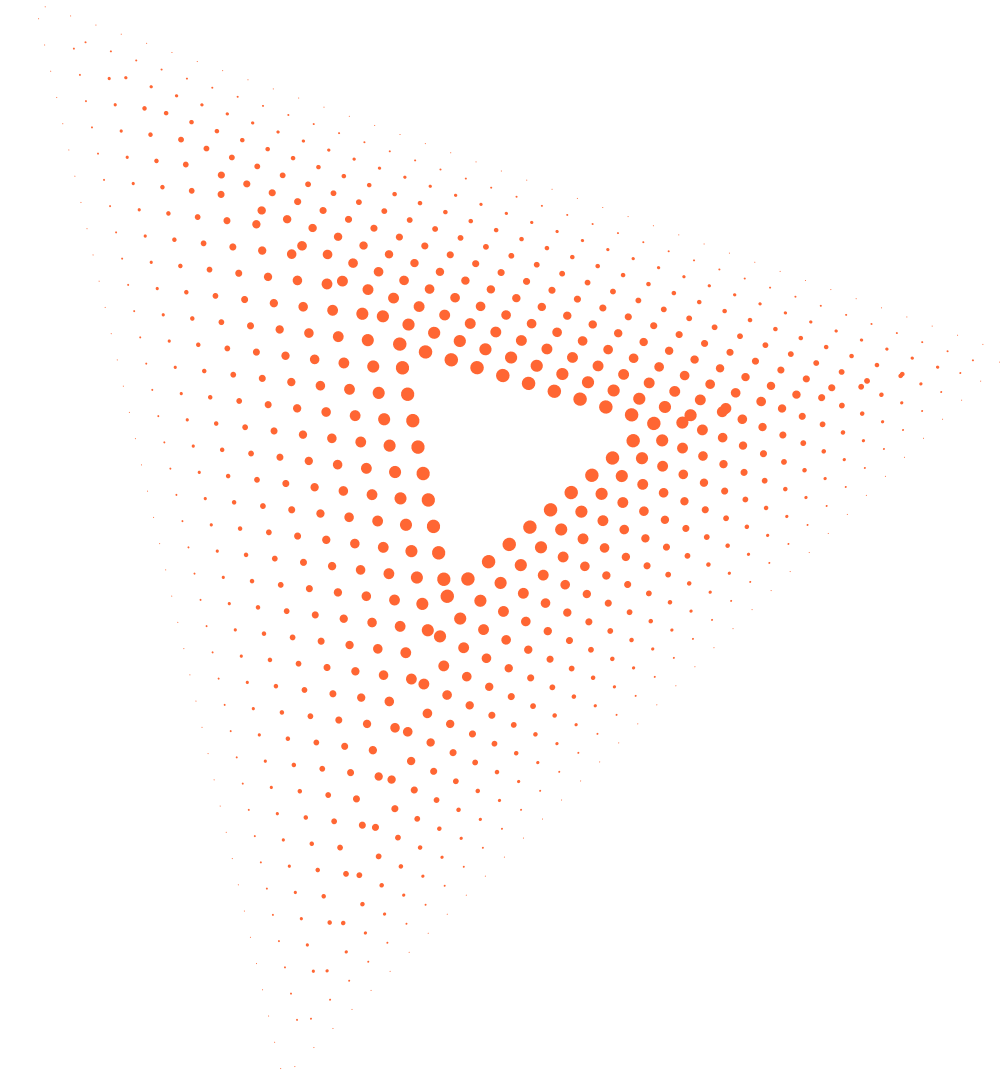

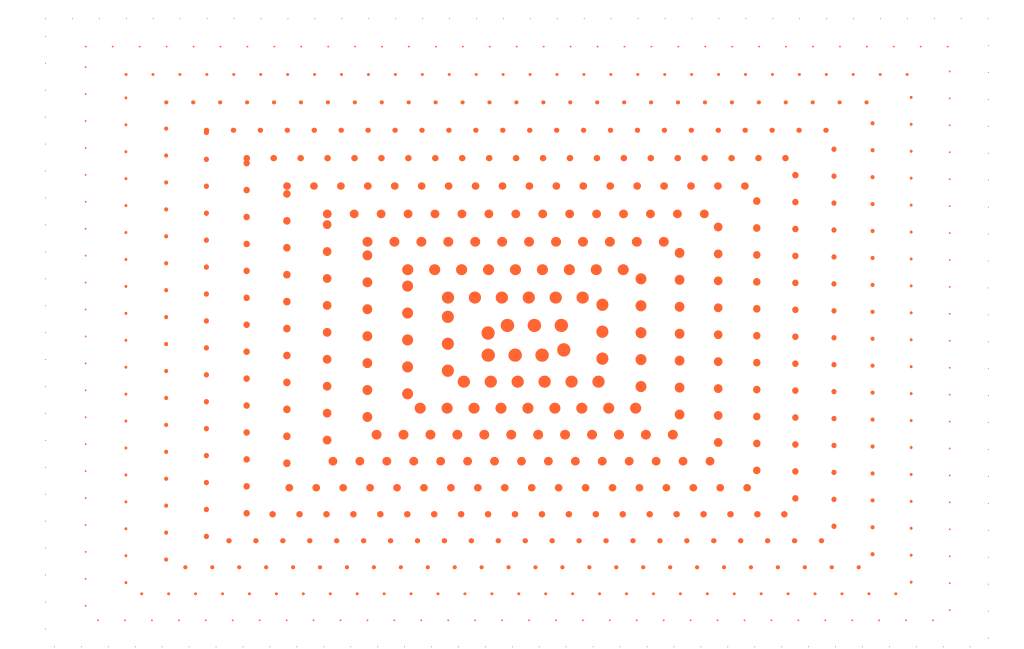

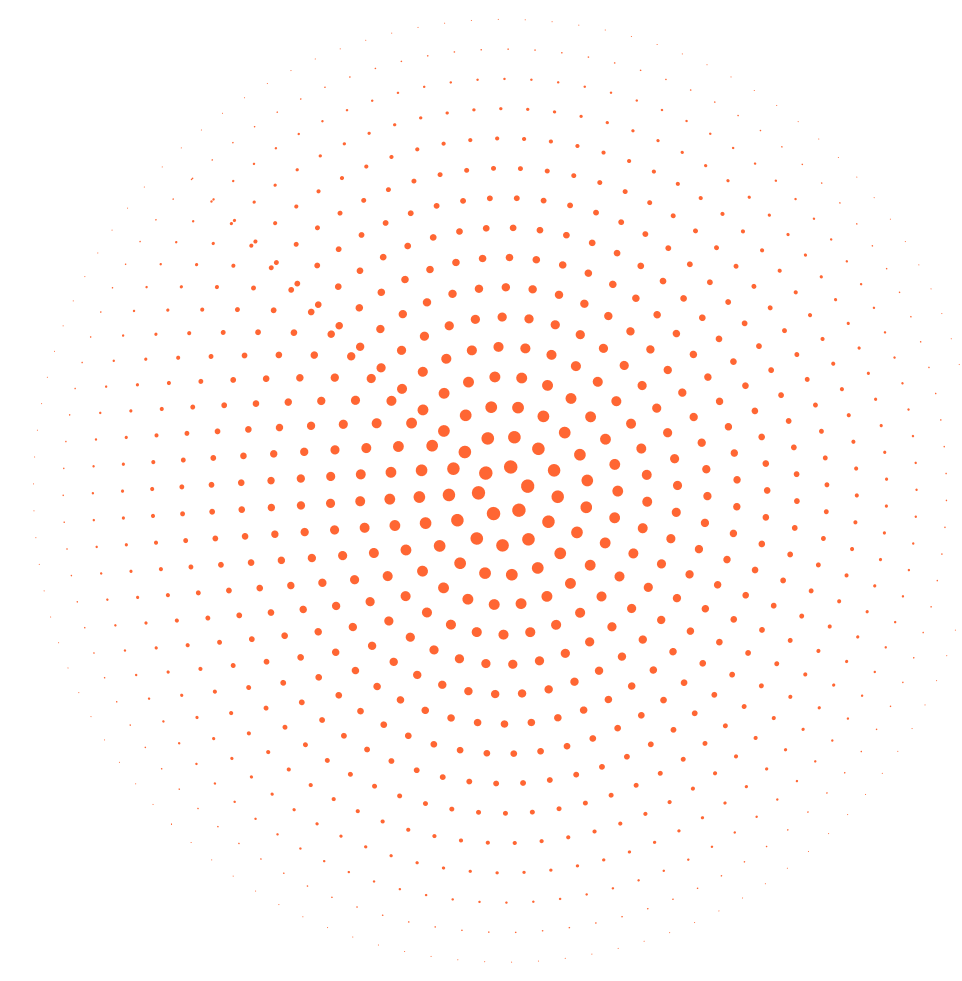

The dots can be used to create basic shapes to be used as patterns, overlays on images, or visual anchors.

The shape made using rows of dots should either be 3 sided, 4 sided, or a circle. This also includes shapes with rounded corners.

The maximum size of a dot can only be 1% of the area of the collateral it's used upon. For example, in a 500x500 px document, the biggest dot can only be 5x5 px big.

Ensure that the dots are scaled down uniformly outwards from the center of the shape to show depth and create an illusion of 3D. The scaling should be that the outer most row has dot size of 0px.

To bring a sense of depth minimum of 8 rows of dots should be used. Ensure an exclusion zone equivalent to the size of the biggest dot is maintained between each row of dots. The rows must not overlap.

Graphic Elements

Construction- Shape Tunnels

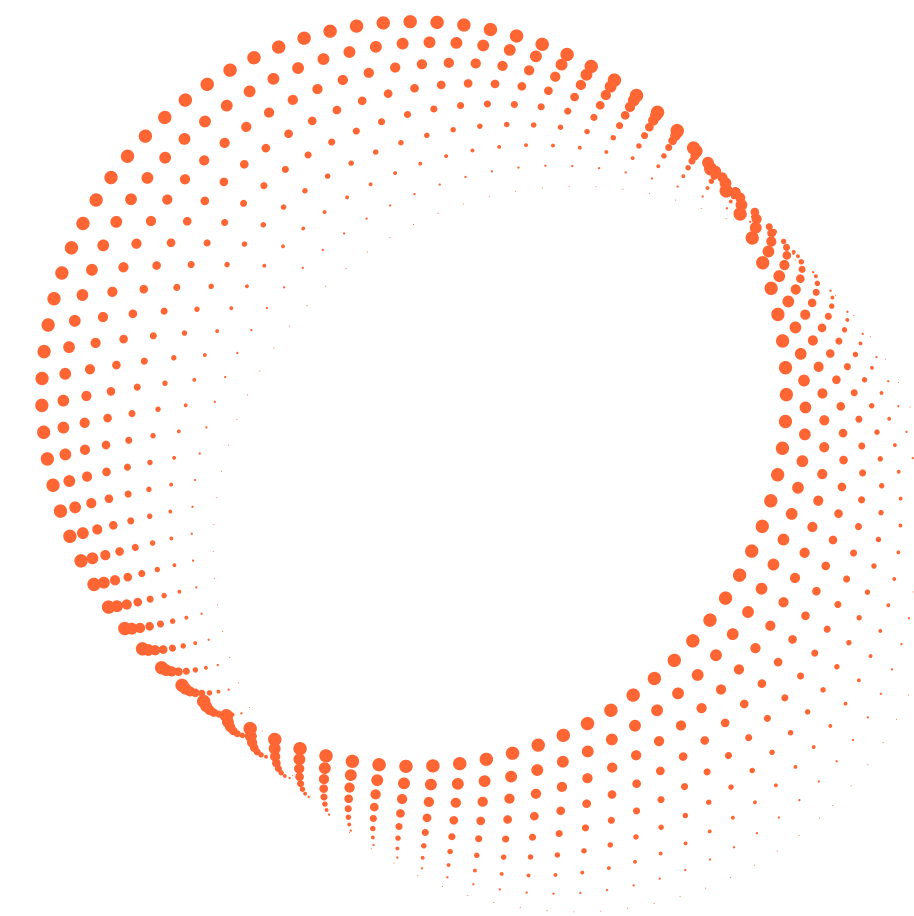

Overlapping rows of dots can be used to create tunnels out of the above defined basic shapes to be used as graphic elements to compliment the text on any digital or marketing collateral.

Create a shape outline from a row of dots and begin to create copies of the original dots with a slight offset in terms of position and scale.

The outer most row should have a dot size of 0px, and should be positioned far enough to create proper depth for the original shape outline.

Ensure that the overlapping rows of dots are not combining with each other to create a shape of their own. Instead, the overlap of dots should be used to create a sense of shadow.

The maximum size of a dot can only be 1% of the area of the collateral it's used upon. To bring a sense of depth minimum of 8 rows of dots should be used.

Graphic Elements

Construction- Complex Shapes

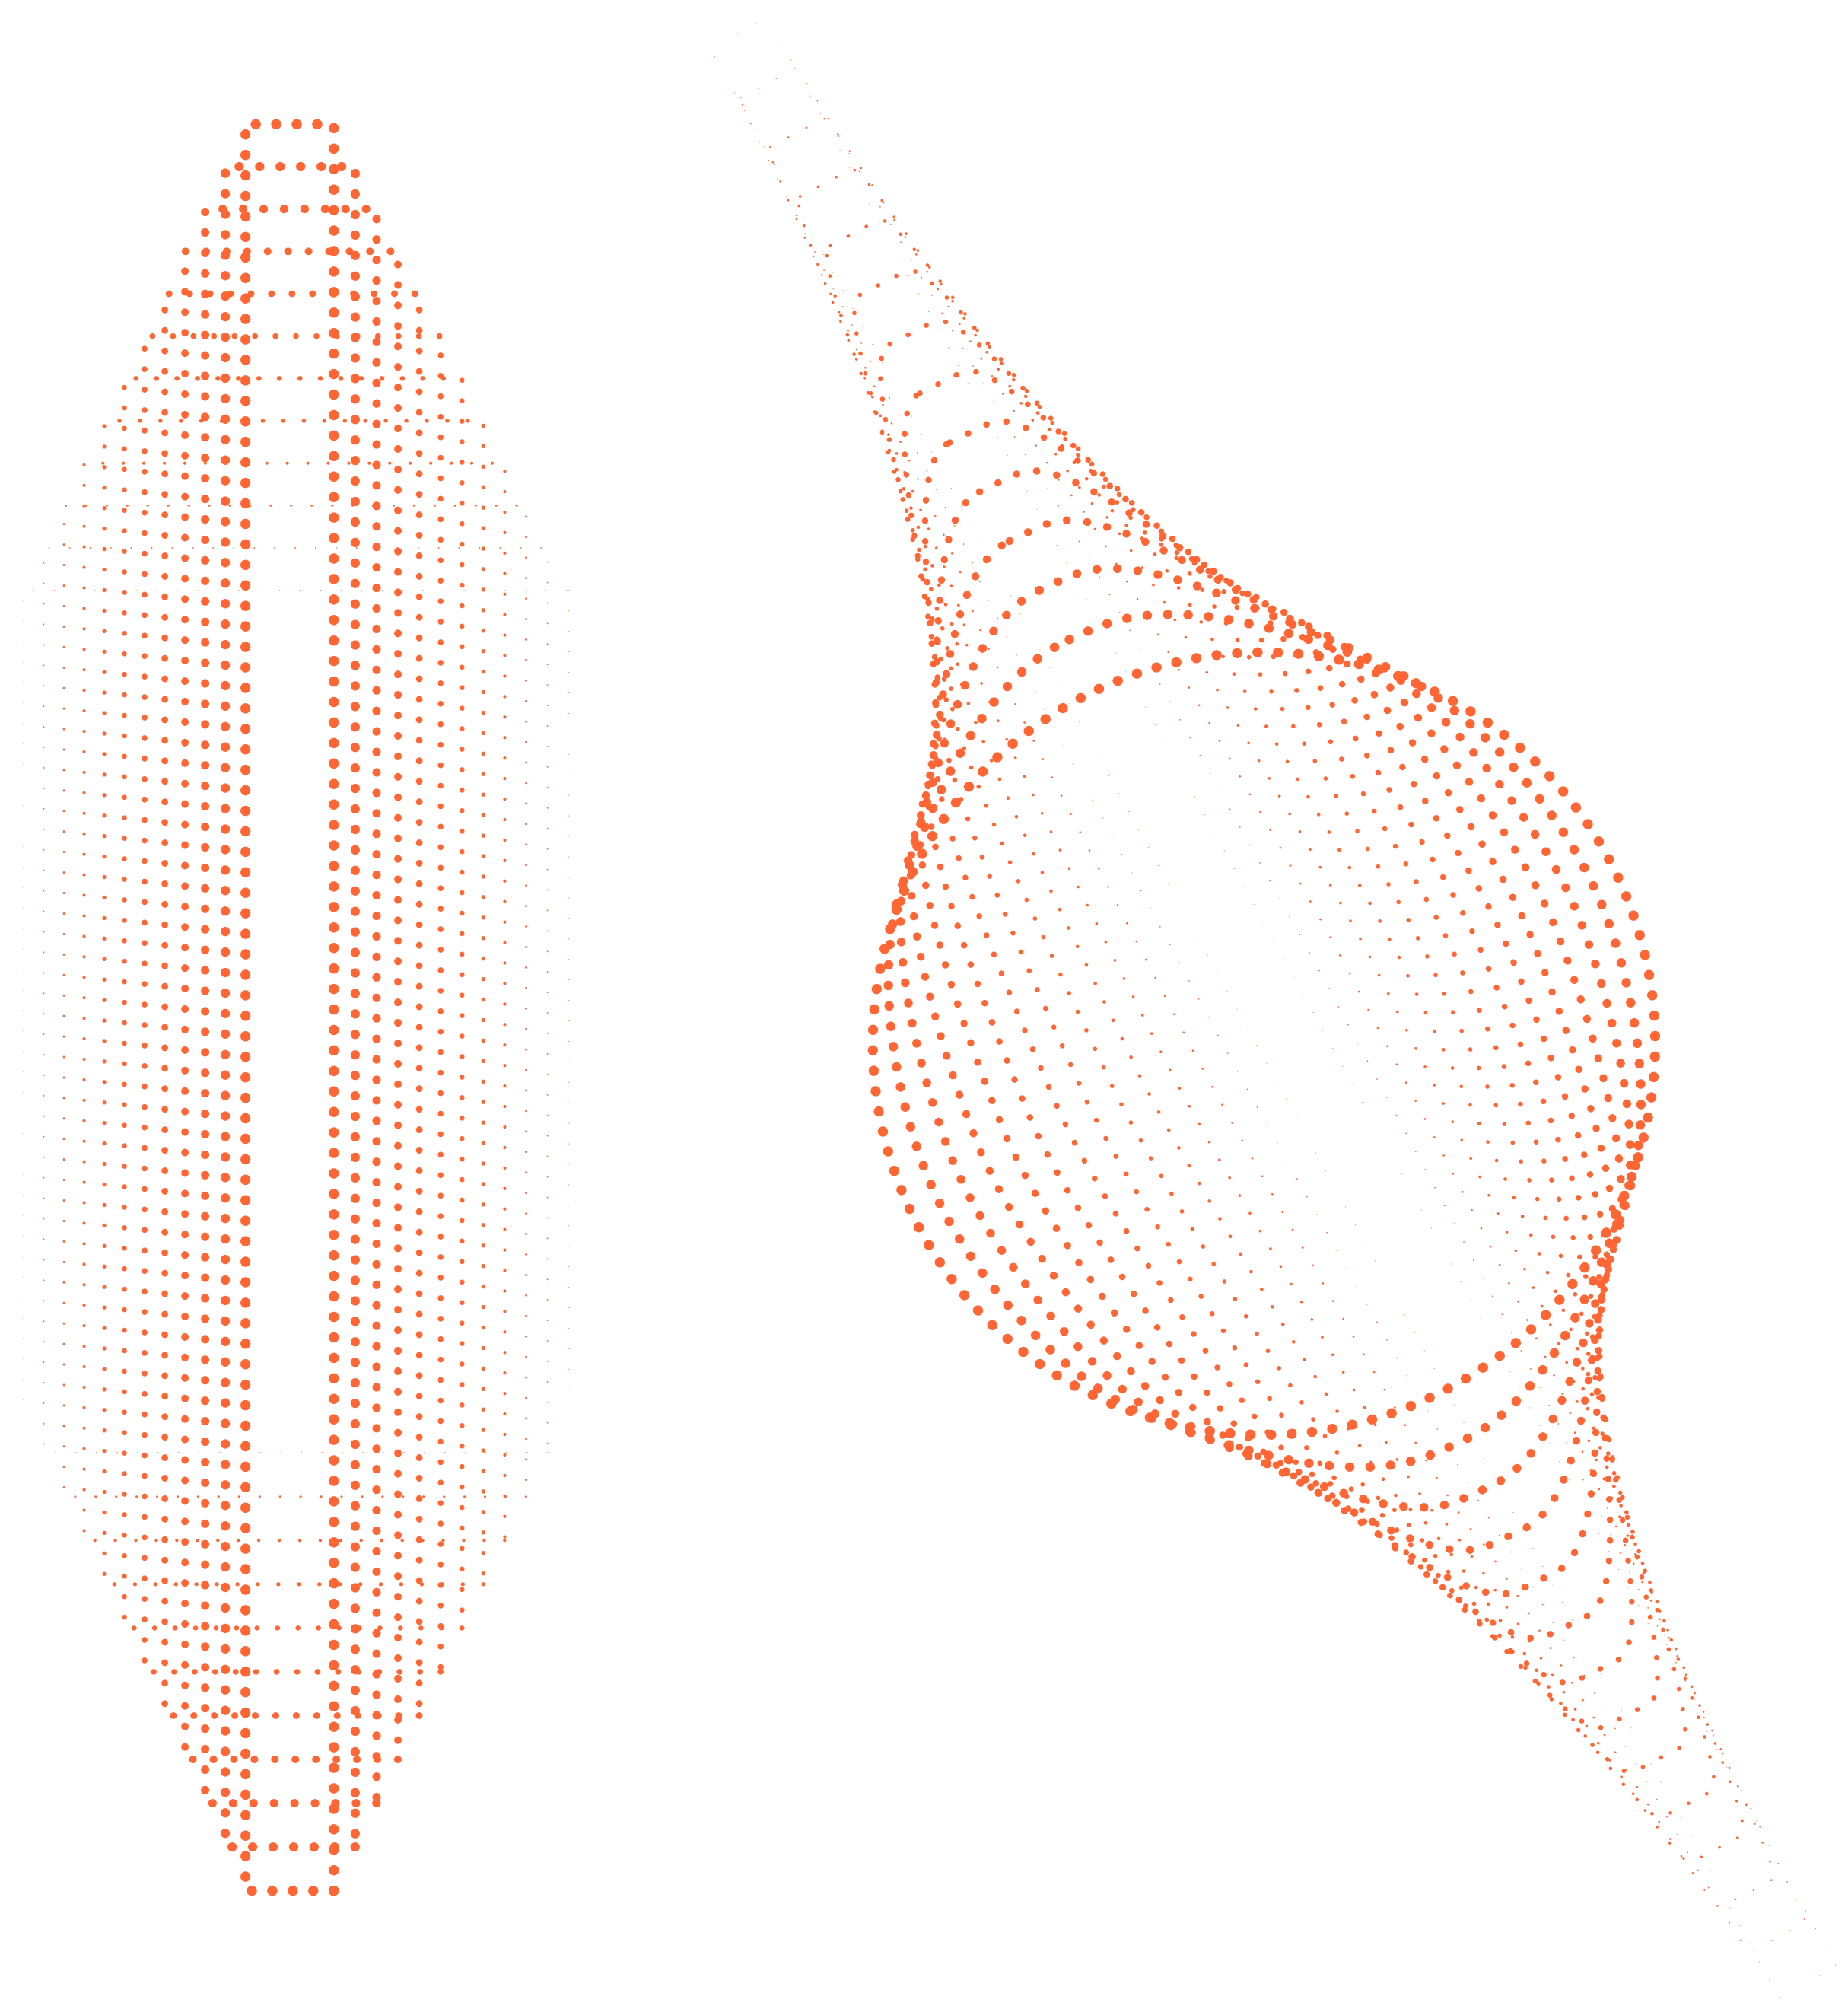

Combination of 2 defined shapes can be used to create complex graphic elements for use as hero images on banners, editorials, and marketing pieces.

Proportions of one of the shapes can be blow up or down to create an interesting illustration that is simple yet full of character.

The maximum size of a dot can only be 1% of the area of the collateral it's used upon. For example, in a 500x500 px document, the biggest dot can only be 5x5 px big.

The outer most row should have a dot size of 0px, and should be positioned far enough to create proper depth.

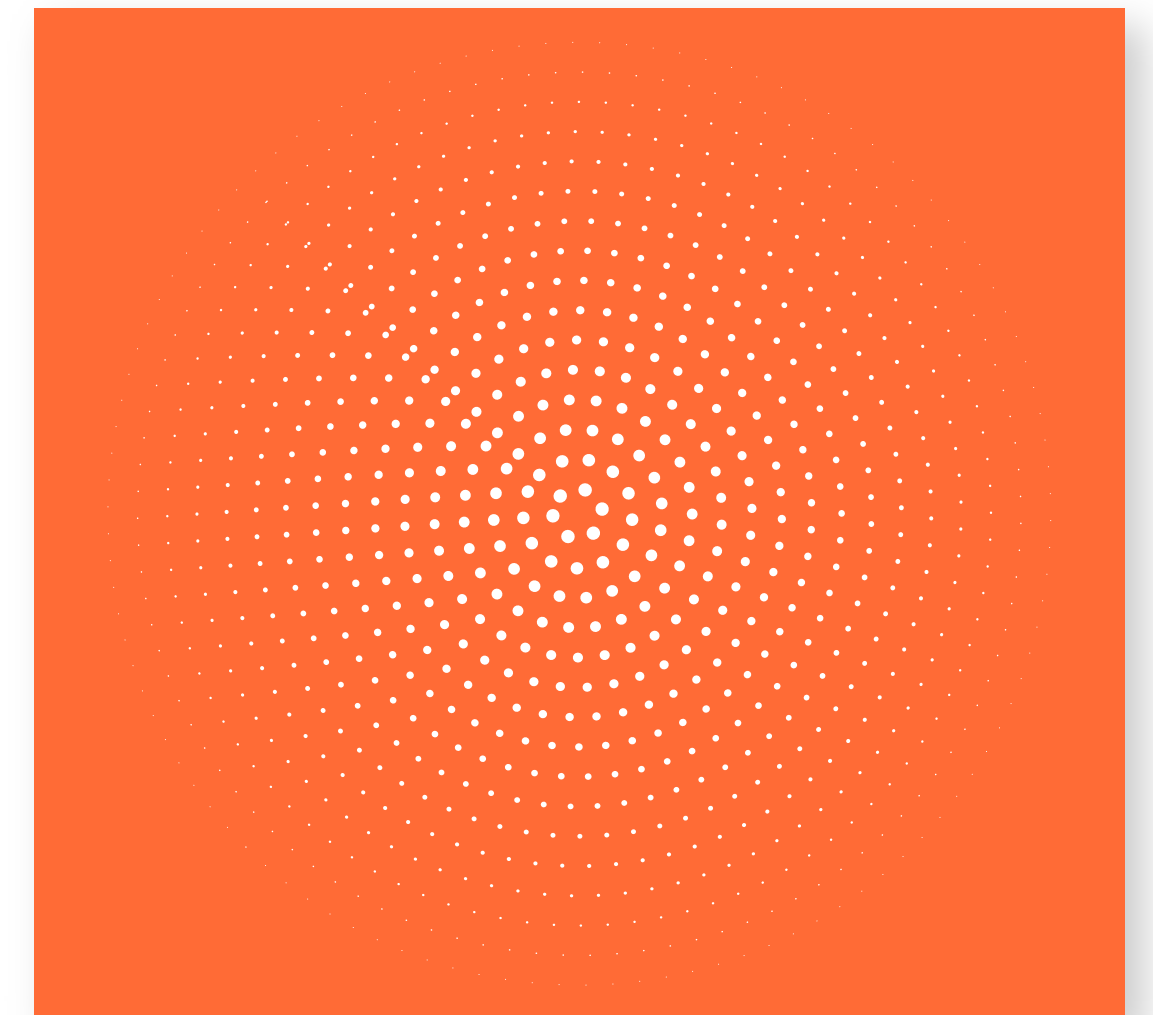

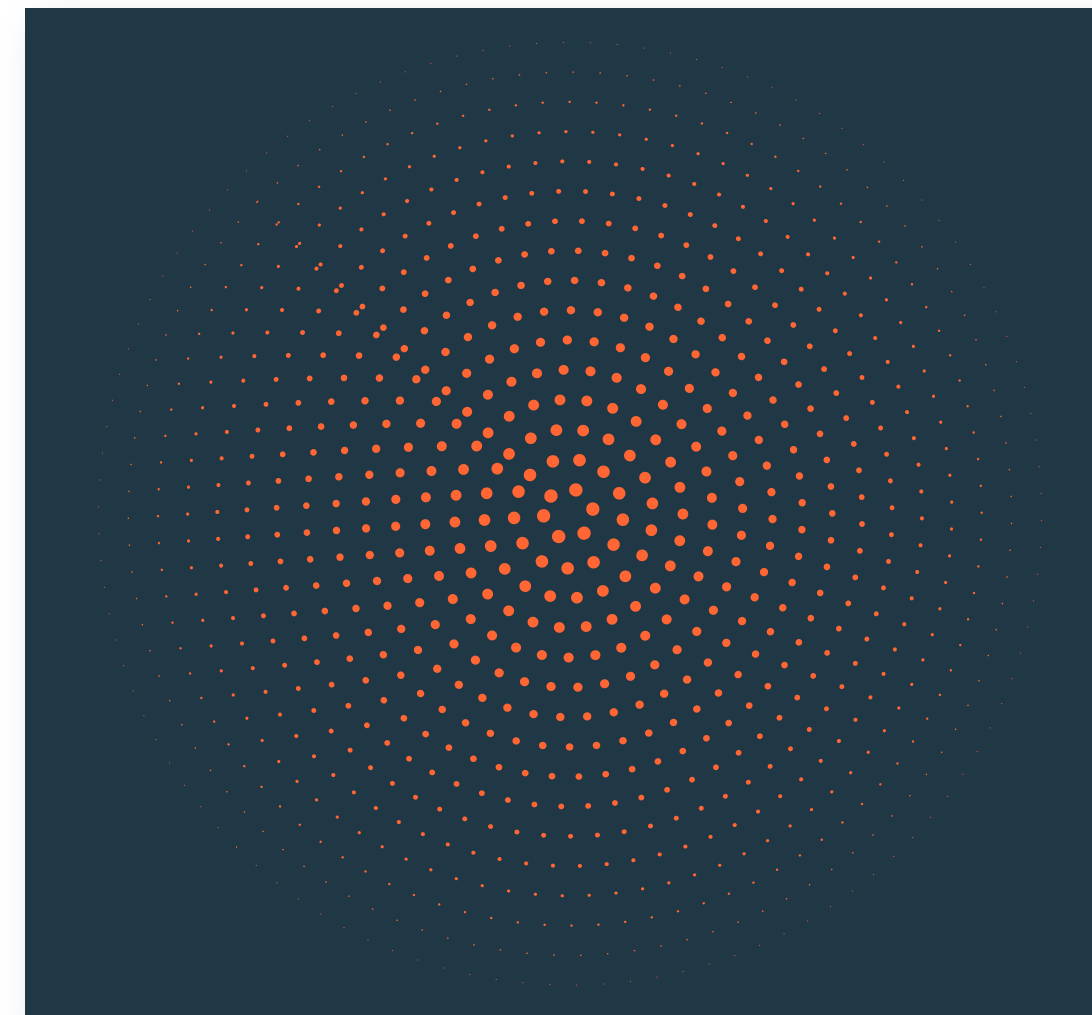

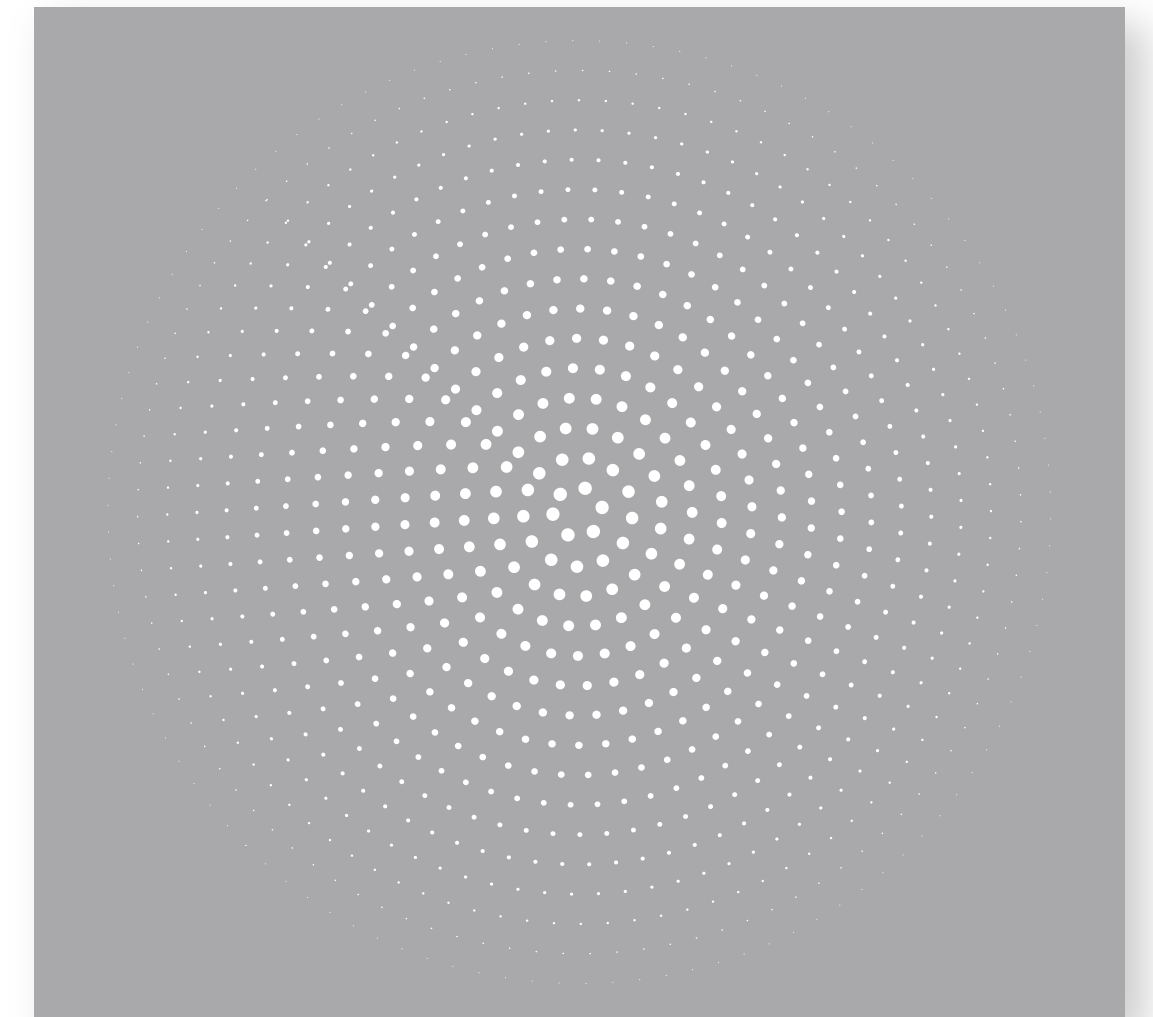

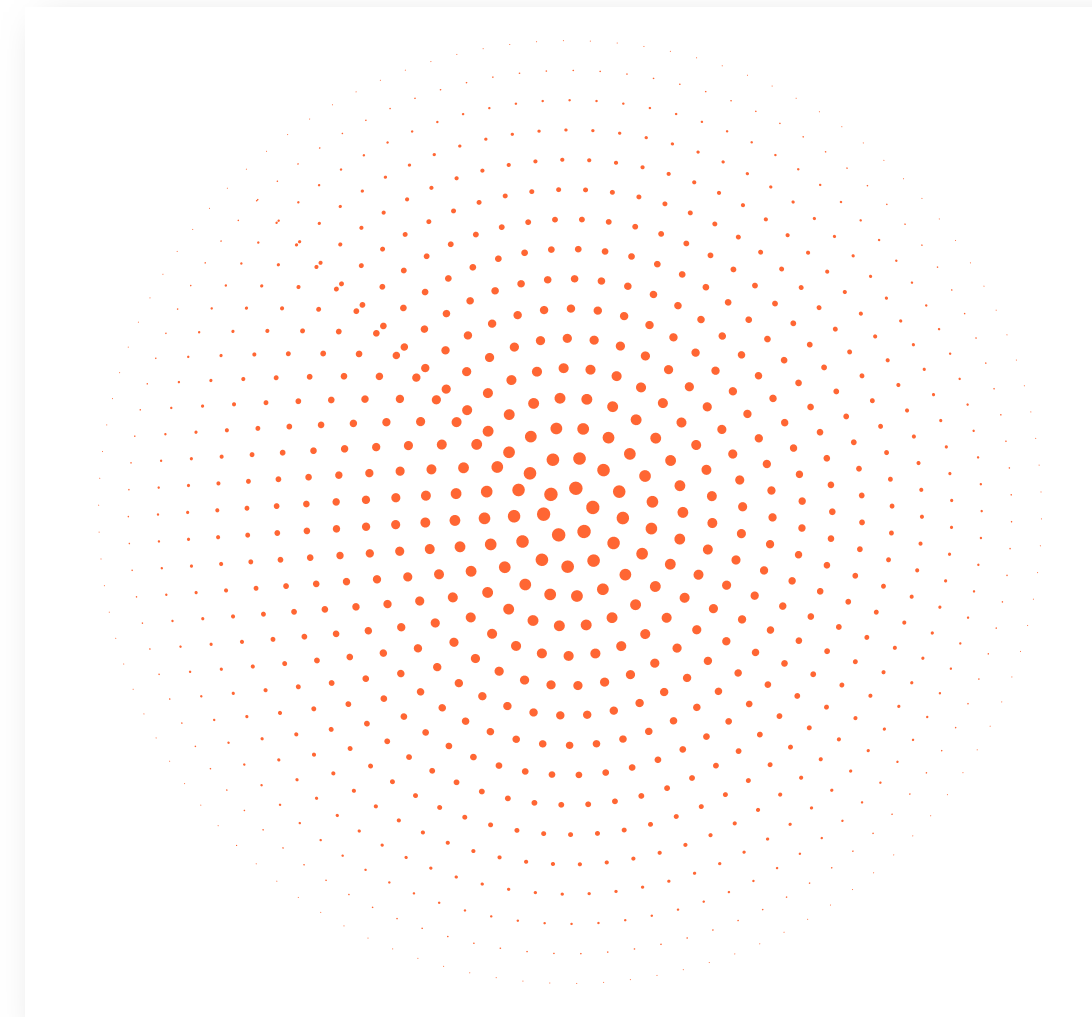

Ensure that the overlapping rows of dots are not combining with each other to create a shape of their own. Instead, the overlap of dots should be used to create a sense of shadow.

Graphic Elements

Colour

Any element made using the dots should only be used in either white or orange colour.

Graphic Elements

Usage

At no point should the dot illustrations take up more than 1/3rd of the surface area on any collaterals.

The elements can only be used in orange and white colour, and the maximum dot size is 1% of the total surface area of the collateral. (For a 500x500px document, the largest dot size is 5px)

Illustrations should not overpower the image or the textual content in the collateral. When using on images, ensure the the elements are not covering more than 1/5th of the surface area of the image and are only used on the edge of the image, never in the center of the image.

It is advisable to use the illustrations on the edge of a collateral for a more interesting layout. But they can also be used as whole when used as hero images.

Layouts

Colour Blocking

The primary colour block should always be end to end with the length it's created on. The colour blocks must never cover more than 2/3rd of the surface area on any collateral or marketing piece.

Colour blocks are done in primary colour palette only. It is advisable to use white blocks wherever possible, followed by orange and black colour blocks for textual contents and supers.

The colour block can only contain text and CTAs, images are to have their own block and cannot be inscribed in another block.
