

SKIN MEDICINALS

Having trouble getting medications covered for your patients?

Skin Medicinals was created to provide patients with access to science-based, compounded topical medications along with affordable prices. We strive to provide high quality compounded medications for every patient utilizing the expertise of their physicians.

We have combined many of the common ingredients such as clobetasol (0.05% or .01%), desonide, and triamcinolone, and additional anti-inflammatory ingredients such as hydrocortisone and turmeric in order to offer you high quality compounded medications for your patients for **cash prices** that are significantly lower than what you would pay for the same medication at a specialty pharmacy.

We have given the ability for you as the dermatologist to customize specific acne and anti-aging products by adjusting the strength based on your determination on what is appropriate. We also offer highly popular compounded medications such as hydroquinone (2%/4% acid 6%), 5-fluorouracil/calcipotriene, rosacea triple cream, and a wart paste. There is **no need for prior authorizations**, and your patients will always receive their medication at a very reasonable cost.

While many specialty pharmacies promote \$0 co-pays to patients, they actually charge patient's insurance exorbitant prices that raise deductibles the following year and make it even harder to obtain necessary medication. Unfortunately, the immediate solution leads to long term consequences. Medications provided to patients with co-pay cards from pharmaceutical companies often charge their insurance providers hundreds or even thousands of dollars. This **ultimately increases costs to our healthcare system and drastically increases insurance premiums year after year.** This ultimately has a negative impact on all of us including our patients. Skin Medicinals was created to help do its part in fixing a broken system when it comes to prescription drug prices.

You will evaluate your patient in office.

You then select the specific compounded topical medication needed to improve their condition.

Your patient is billed and shipped. Medication is shipped.
